Required Book: Dimensional Analysis for Meds, 4th Edition Anna M. Curren, MA, RN Copyright© 2010 Delmar Cengage Learning

Recommended CD/Book: Calculating Drug Dosages: An Interactive Approach to Learning Nursing Math, 2nd Edition by Sandra Luz Martinez de Castillo, RN, MA, EdD Copyright © 2010 F.A. Davis Company

#### I. Course Description:

This course focuses on those components of safe medication calculation and administration. The emphasis is on accuracy of calculation and the critical thinking involved in client/patient safety. This is an intense class on med math calculations that is required of all RN majors. Clinical application is integrated into the clinical nursing courses.

#### II. Course Objectives:

- 1. Calculate basic mathematic problems including addition, subtraction, multiplication & division of fractions & decimals.
- 2. Convert metric, apothecary and household measures accurately.
- 3. Solve dosage problems using dimensional analysis
- 4. Calculate adult & pediatric dosages.
- 5. Calculate intravenous flow rates.
- 6. Interpret drug orders and labels relevant to the safe administration of drugs.
- 7. Discuss the "Six rights" of clients relative to administration of medications.
- 8. Describe the routes of administration.

## III. Specific Course Information

- 1. The passing course grade is 75%.
- 2. Exams will be given periodically during the course. Exams will count for 75% of the final grade.
- 4. Final exam will count for 25% of the grade. The Final Exam must be passed with a 75%,
- 5. Nursing Course grades are based on the following scale.

A= 92-100%

B= 83-91%

C= 75-82%

D=68-74%

F= Below 68% (No Makeup exams will be given!)

#### **Drug Dosage Calculation Description:**

This class will present the dimensional analysis method as a tool to use in solving all drug dosage calculation problems.

### **Unit Outcome Competencies:**

The student will practice problems in class, in the Nursing Learning Center and at home to develop proficiency in calculations.

#### Student Learning Outcomes.

Upon completion of this class the student will be able to:

- 1. Calculate the flow rate of a simple primary intravenous line in ml/hr or drops/min as measured by one (1) randomly selected question on the final exam with a class average for the measured question at 92% or better.
- 2. Pass a comprehensive final exam on dosage calculations at 75% including critical care and pediatric problems.

#### **Student Learning Activities:**

To assist in learning the content the student will:

- 1. Complete problems in the assigned references
- 2. Complete problems on the assigned study guides
