Course / Catalog Description:

An introduction to the concepts of Algebra. Topics covered include solving equations, polynomials, factoring, rational expressions, graphs and linear equations, systems of linear equations, and inequalities.

Course Objectives: Through various activities and assessments, during the semester students will:

1. Demonstrate skills in solving first degree equations.
2. Demonstrate the ability to solve many problems in diverse areas, in step-by-step manner, when dealing with applications.
3. Develop manipulation skills when operating polynomials.
4. Demonstrate the various types of factoring and be cognizant of the factoring process.
5. Demonstrate and understanding of skills in operations with and simplifications of rational expressions.
6. Demonstrate a visual understanding of the Cartesian Coordinate System and linear graphs

7. Demonstrate the ability to solve linear systems of equations both algebraically and graphically.

Student Learning Outcomes:

Upon course completion, the successful students will have acquired new skills, knowledge, and attitudes as demonstrated by being able to:

1. Solve linear equations in one variable
2. factor polynomial expressions using a variety of methods and solve polynomial equations.
3. Graph linear equations and find values related to linear graphs.
4. Solve application problems appropriate to beginning algebra.
